Demethylation of IGFBP5 by Histone Demethylase KDM6B Promotes Mesenchymal Stem Cell-Mediated Periodontal Tissue Regeneration by	<i>Stem Cells</i>	1	2015	7.532	SCI

Enhancing Osteogenic Differentiation and Anti- inflammation Potentials.					
Depletion of MEIS2 inhibits osteogenic differentiation potential of human dental stem cells.	<i>Int J Clin Exp Med</i>		2015	1.413	SCI
Physiologic Levels of Endogenous Hydrogen Sulfide Maintain the Proliferation and Differentiation Capacity of Periodontal Ligament Stem Cells.	<i>J Periodontol</i>	2	2015	3.166	SCI
			2014		
All-optical regulation of gene expression in targeted cells.	<i>Scientific Reports</i>	4	2014	5.5	SCI
Periodontal Ligament Stem Cells Regulate B Lymphocyte Function via Programmed Cell Death Protein 1	<i>Stem Cells</i>	1	2013	7.532	SCI
